## Preliminary results of the space laser ranging experiment of spacecraft «Lomonosov»

A.S.Akentyev, A.L.Sokolov, M.A.Sadovnikov, V.D.Shargorodskiy,  
V.P.Vasiliev

20<sup>th</sup> International Workshop on laser ranging  
Potsdam. 2016

# Lomonosov

Mikhail Lomonosov  
(11.19.1711 – 04.15.1765)

Lomonosov Moscow State University

SC «Lomonosov» was launched  
in 28 April 2016 from the new  
cosmodrome “Vostochniy”

Scientific equipment is aimed at studying:

- the cosmic rays of the extremely high energy ( $10^{19} – 10^{20}$  eV).
- the space gamma-bursts.
- the transient luminous phenomena in the upper atmosphere.

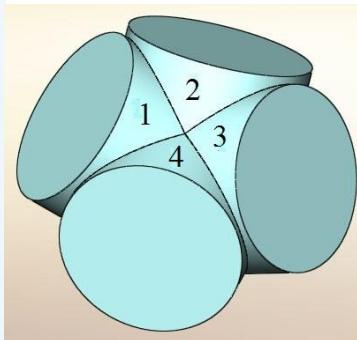

## New laser retroreflector arrays

| Array                                    | Mass    | Size (mm)      | Cross section for aberration angle   |
|--|---------|----------------|--------------------------------------|
| Array "PYRAMID"<br>for LEO-satellites    | 60 g    | 40x40x20       | $(1 - 5) \cdot 10^4 \text{ m}^2$     |
| SC "BLITS-M"                             | 17 kg   | R = 110        | $(0,2 - 0,3) \cdot 10^6 \text{ m}^2$ |
| SC "GLASS"                               | 20,5 kg | R = 110        | $(1,0 - 1,1) \cdot 10^6 \text{ m}^2$ |
| Ring retroreflector<br>array for GLONASS | 4,0 kg  | R = 350        | $(1,7 - 1,9) \cdot 10^8 \text{ m}^2$ |
| Array for SC "Luna-GLOB"                 | 0,95 kg | 190 x 170 x 45 | $(2,3 - 2,5) \cdot 10^8 \text{ m}^2$ |

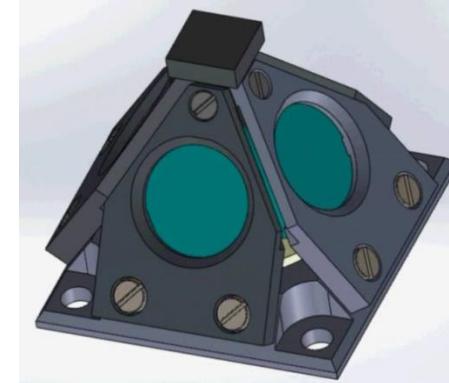

## The array “PYRAMID” for LEO-satellites

Location of corner-cube reflectors (CCRs)

View of the assembly

| “Pyramid” | Mass | Size        | Attitude  | Target error | Average cross section      |
|-----------|------|-------------|-----------|--------------|----------------------------|
|           | 60 g | 40x40x30 mm | < 1000 km | < 0,5 mm     | $3 \cdot 10^4 \text{ m}^2$ |

## Comparison of retroreflector arrays

| SC and retroreflector arrays   | Number of CCRs | Mass  | Size          | Target error |
|--------------------------------|----------------|-------|---------------|--------------|
| <b>Champ</b><br>               | 4              | 210 g | 110x110x48 mm | < 5 mm       |
| <b>CryoSat-2 and other</b><br> | 7              | 300 g | Ø114x50 mm    | < 6 mm       |
| <b>Pyramid</b><br>             | 4              | 60 g  | 40x40x30 mm   | < 0.5 mm     |

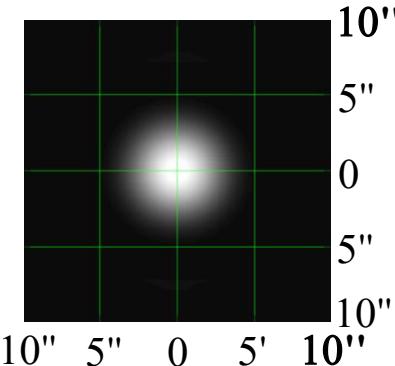

## Cross-section of the corner-cube reflectors

| Nº CCR | FFDP | Cross section              | Nº CCR | FFDP | Cross section |
|--------|------|----------------------------|--------|------|---------------|
| 1      |      | <p>theory • experiment</p> | 3      |      |               |
| 2      |      |                            | 4      |      |               |

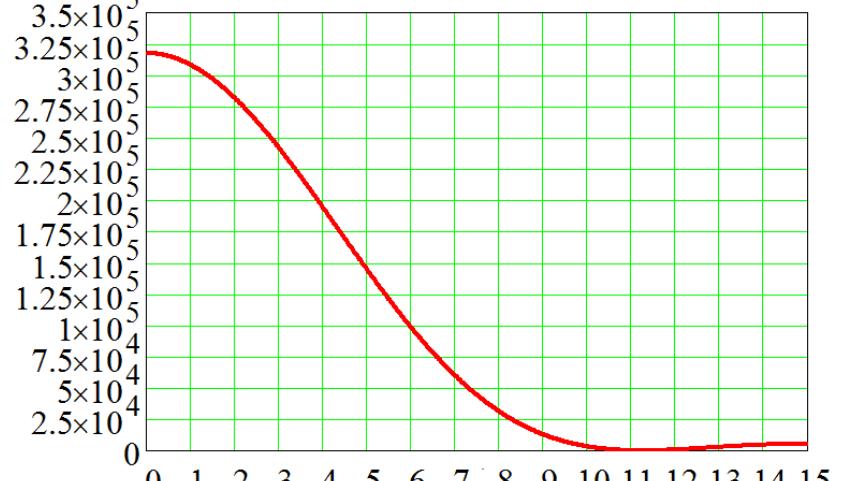

Aperture size is 12 mm

# Far Field Diffraction Pattern (FFDP) and cross-section of CCR for «Pyramid»

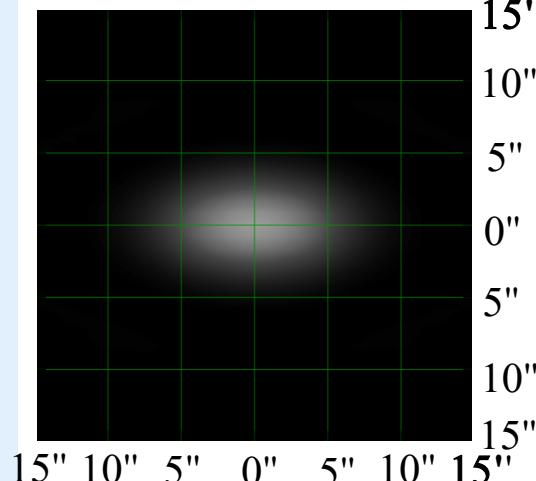

**Incident angle = 0°**

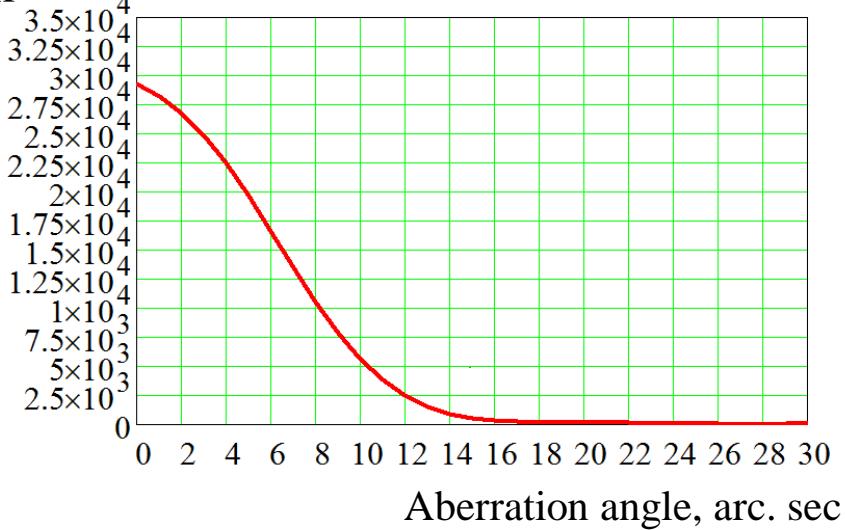

$\sigma, \text{m}^2$

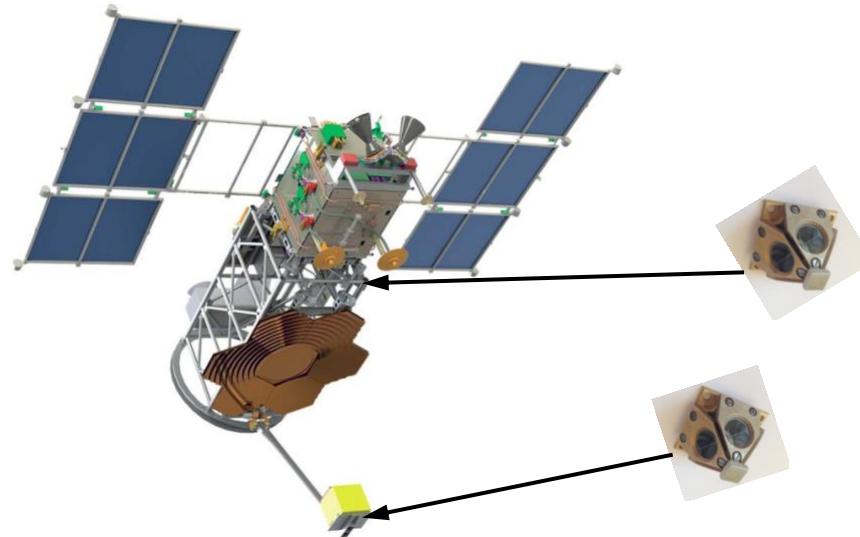

**Incident angle = 30°**

$\sigma, \text{m}^2$

## Two retroreflector arrays «Pyramid» for SC «Lomonosov»

|                     |                 |
|---------------------|-----------------|
| Orbit type          | sun-synchronous |
| Orbit altitude      | 500 km          |
| Inclination         | 97,6°           |
| Spacecraft mass     | 620 kg          |
| Exploitation period | 3 years         |

**The purpose of the retroreflectors installation on the SC "Lomonosov":**

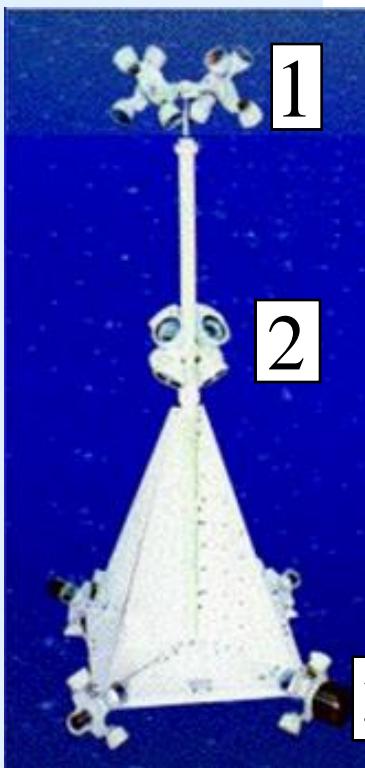

**additional emergency monitoring of rod photodetectors opening by recording the time interval between the pulses, reflected from two retroreflector arrays “Pyramid”;**

**And also**

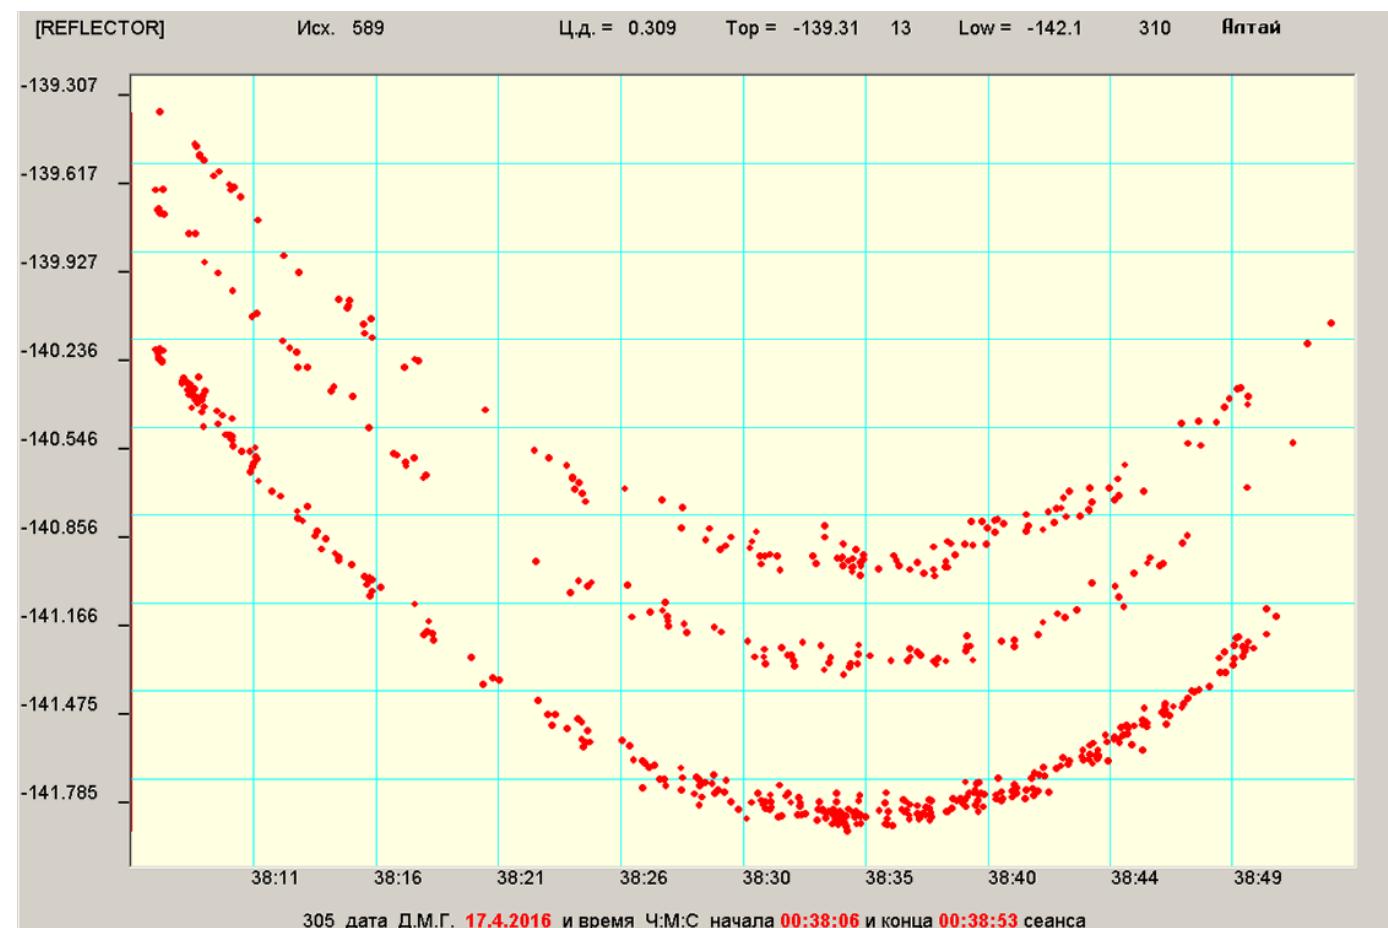

- determining of the spacecraft orientation;
- construction of the orbit for the radio equipment calibration;
- evaluation of operating and accuracy characteristics of RA in space.

## SC «Reflector». Ranging session of the Altay station

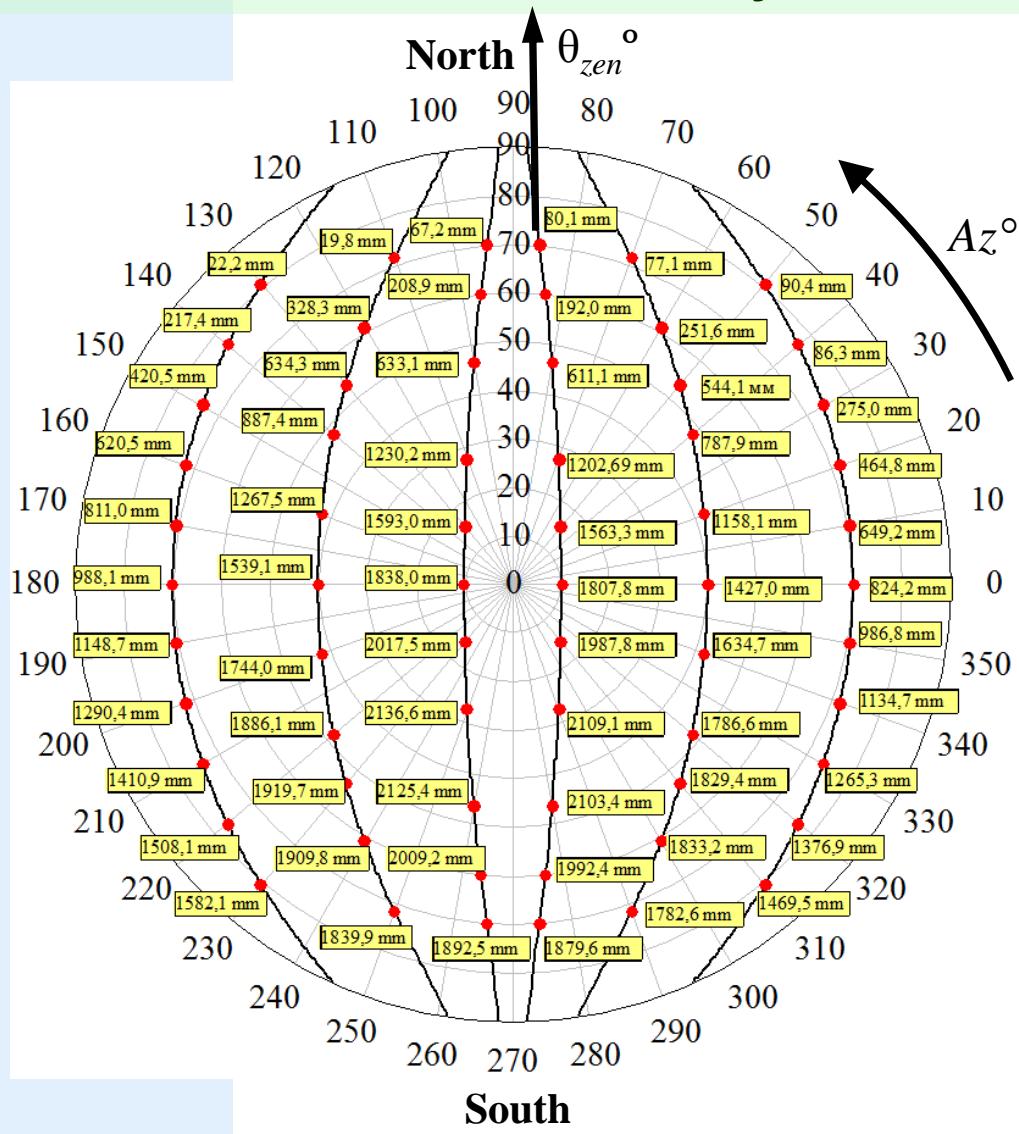

Altitude orbit 1000 km

Distance between retroreflectors:  
1 – 2: 0,35 м  
2 – 3: 0,53 м

# Theoretical estimation of a range difference between retroreflector arrays of SC «Lomonosov» for a flight

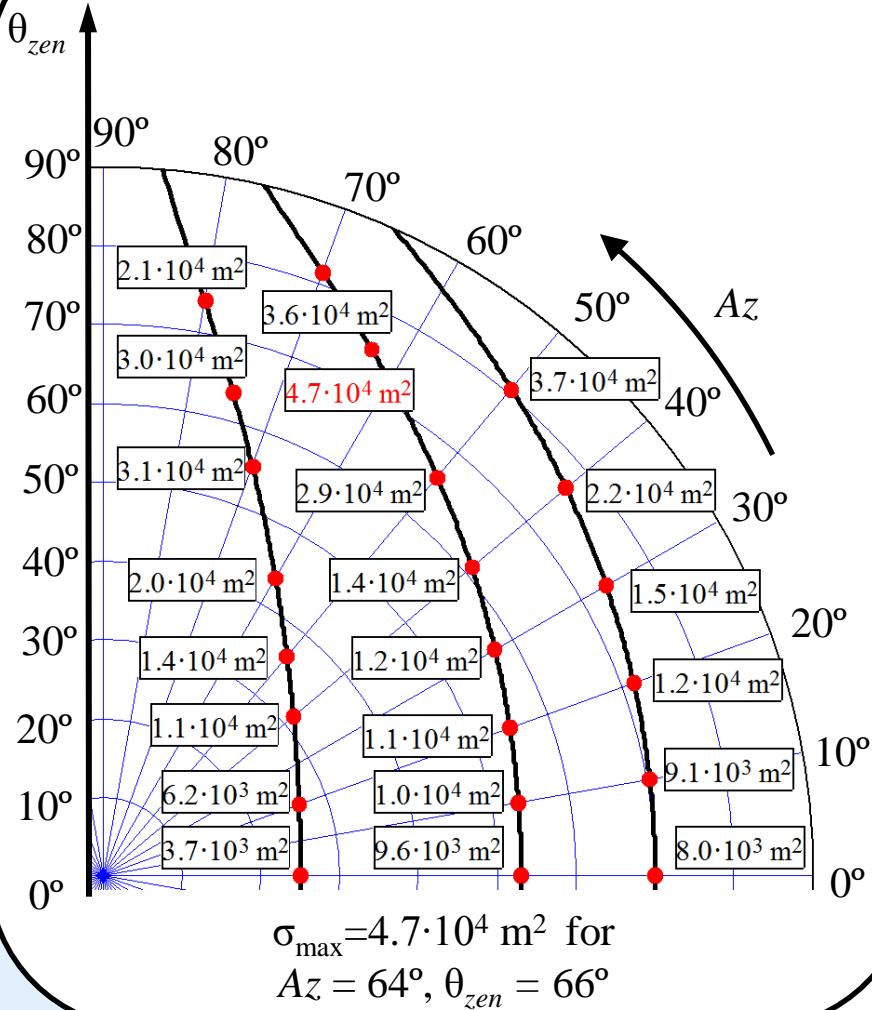

Minimum range difference between  
RA № 1 and RA № 2  
 $Az = 90^\circ \dots 130^\circ, \theta_{zen} = 60^\circ \dots 80^\circ$

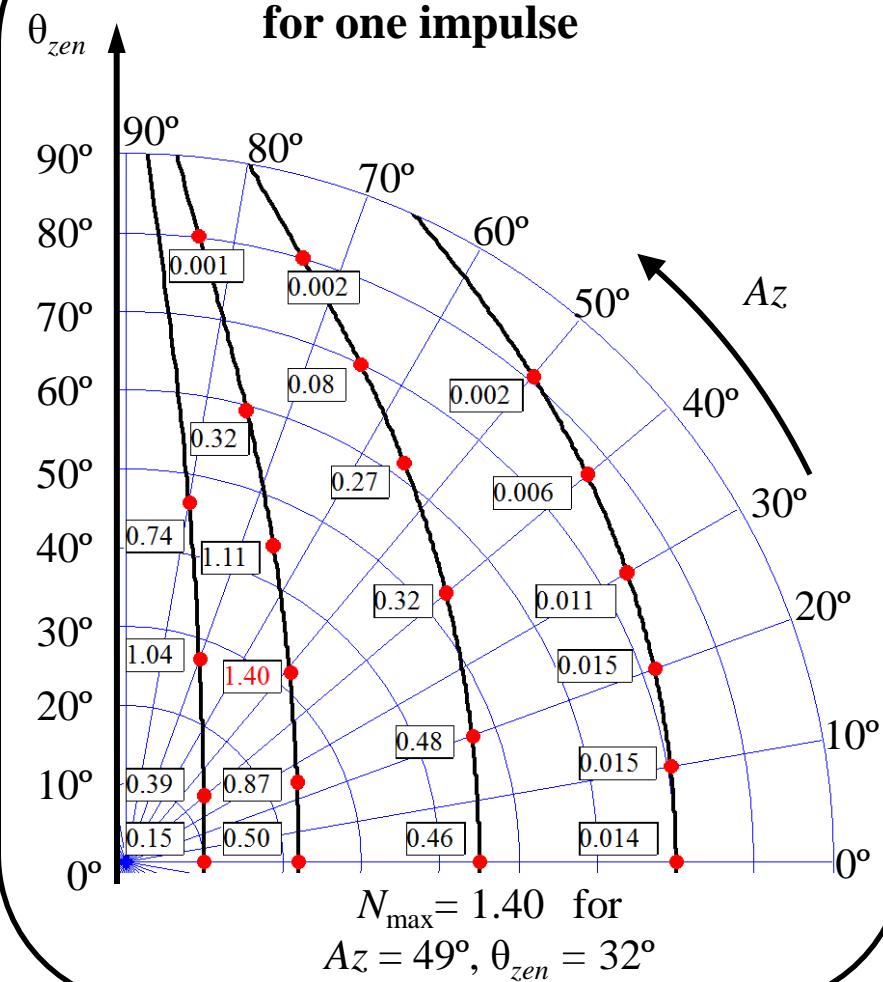

Maximum range difference between  
RA № 1 and RA № 2  
 $Az = 230^\circ \dots 310^\circ, \theta_{zen} = 10^\circ \dots 50^\circ$

# Theoretical estimation of cross section and number of photoelectrons for RA «Pyramid» in SC «Lomonosov»

Cross section

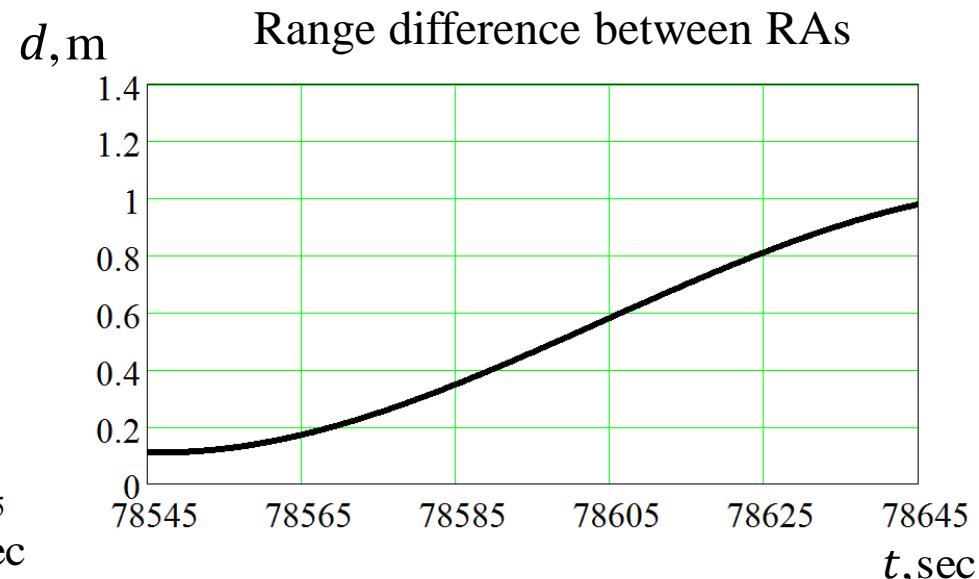

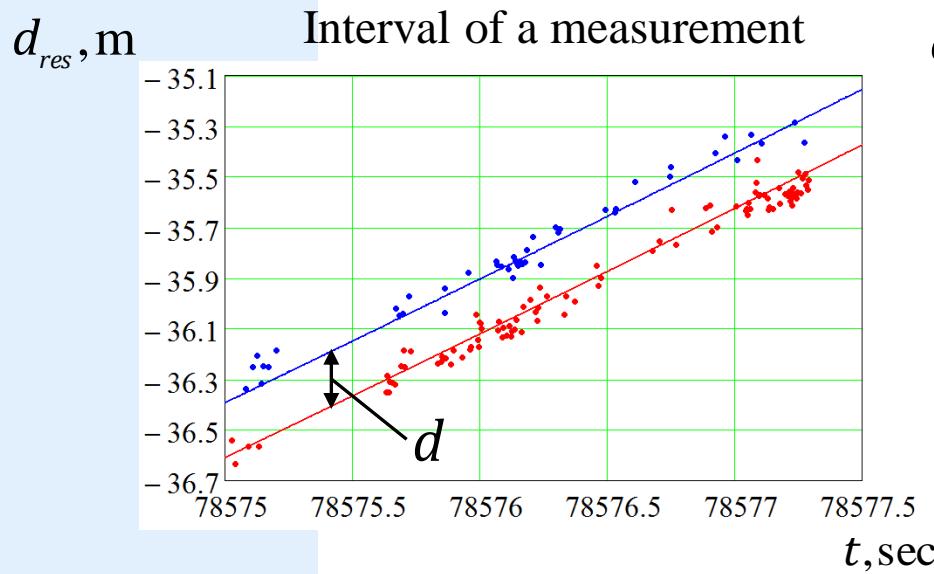

Number of photoelectrons for one impulse

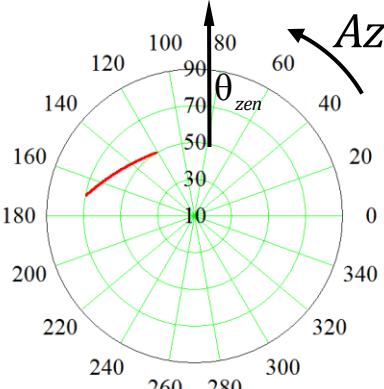

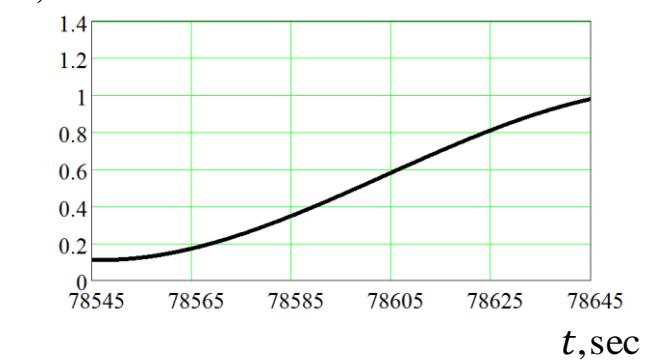

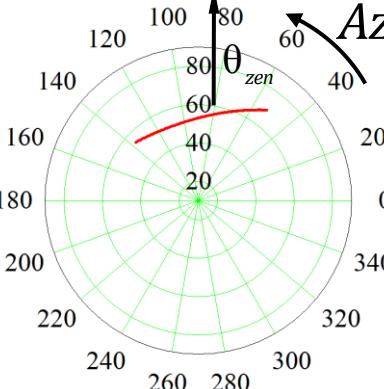

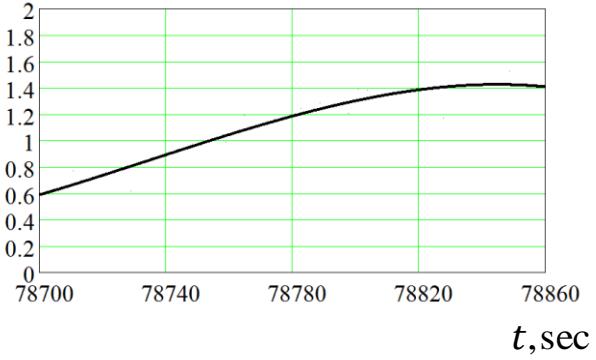

## Two track of reflected signals of SC «Lomonosov»

$t$  – time of measurement (UTC) from the beginning of the day  
 $d_{res} = d_{pred} - d_m$ ;  
 $d_{res}$  – range residuals;  
 $d_{pred}$  – prediction range;  
 $d_m$  – measurement range;  
 $d$  – range difference between RAs.

## Sessions of SC «Lomonosov» laser ranging

| Station     | Date of measurement | Flight of SC at the firmament   | Range difference between RAs  |
|-------------|---------------------|---|---|
| Altay       | 07.06.16            |   | <p><math>d, \text{m}</math></p>    |
| Mendeleev 2 | 07.20.16            |  | <p><math>d, \text{m}</math></p>  |

# Summary

1. The results of laser ranging SC «Lomonosov» demonstrate reliability, availability and sufficiency of cross-section of the little, high-accuracy array «Pyramid» for mounting at LEO SC.
2. The results of laser ranging SC «Lomonosov» have demonstrated two tracks of signal from first and second array. Thus the additional monitoring of the deployment of the SC “Lomonosov” rod was carried out.
3. Arrays «Pyramid» can to be recommended for monitoring of deployment of LEO SC parts and for determination of SC orientation in the space.
4. Laser stations have ability to determine a distance about 20 cm between retroreflectors in single-photon mode.
